NO MATTER HOW COLD IT GETS, CABARET TENT RENTAL HEATERS CAN HELP YOU STAY UP & RUNNING.

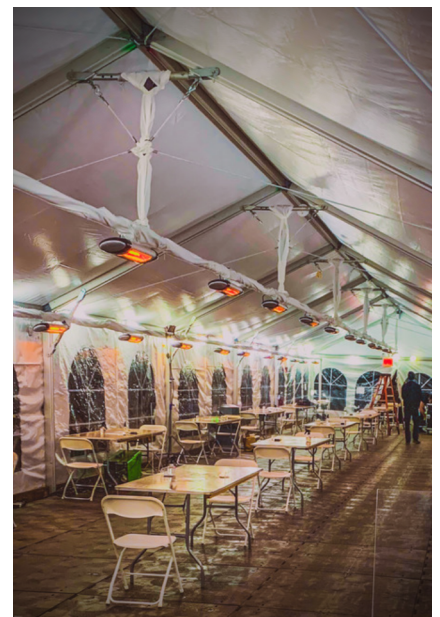

Whether it's extra heating needed during extreme weather conditions or a short-term outdoor heater rental to keep your business operating during the COVID-19 emergency, we can help create a safe and hassle-free experience for your wintertime operation. Delivering fast, reliable and cost-effective solutions when you need them.

Cabaret Tent Rentals Has You Covered

Cabaret Tent Rentals provides scalable heating and power solutions for businesses and special events. We can set up, install and operate equipment for your requirements—indoor or outdoor, short or long-term, large project or small.

Our rentals deliver state-of-the-art equipment and expertise, rapidly transforming the equipment you need into a smoothly functioning heating and power distribution system that will exceed your expectations.

*Cabaret Tent Rentals has
an impressive array of
heating and power
generation equipment.*

ELECTRIC PATIO HEATERS

Electric patio heaters are the most efficient type of patio heater available. They convert up to 98% of their energy into heat using a method of heat transfer called "radiant heat".

Radiant heat is transferred directly to a person or object, so no energy is wasted on warming the air. The heat created won't get carried away by drafts or the wind, making it the most effective way to heat your outdoor space.

The heating power of an electric heater is measured in watts, rather than BTUs. The higher the wattage, the more warmth you will get.

Our portable and ceiling-mounted electric patio heaters range from 500 to 1,500 Watts.

HOW MANY HEATERS DO YOU NEED?

We recommend one heater per table of 2 to 4 seats for maximum effectiveness.

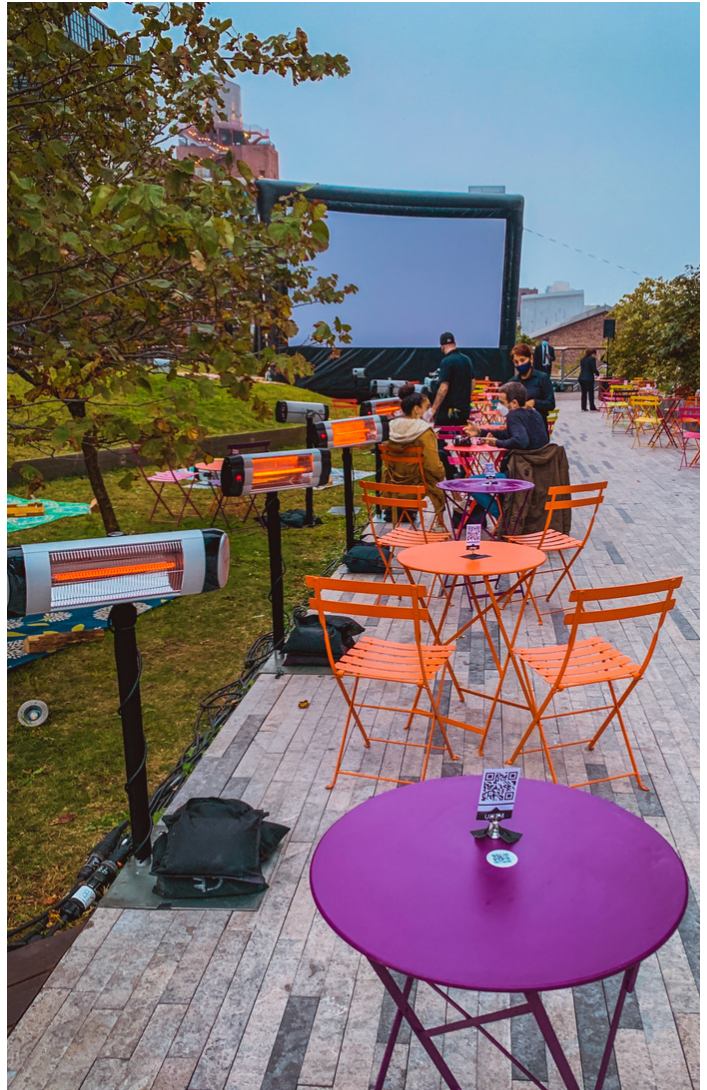

POWER DISTRIBUTION REQUIREMENTS

Most electric patio heaters require a dedicated 15A circuit and cannot be plugged into a standard 120-volt wall socket.

For outdoor dining areas and social distancing spaces, running multiple electric patio heaters at once can quickly become complicated as each heater will require a separate breaker. Most business locations and event venues will not have enough breakers to support more than 2 or 3 heaters operating at one time. This is where Cabaret Tent Rentals comes in.

Our team can install weatherized power distribution to provide enough electricity for all of the electric heaters your business or event requires. From cables to distribution boxes, Cabaret Tent Rentals can provide a custom solution to your power distribution needs.

POWER GENERATORS

Whether you need a portable generator that's quiet, small, electric, an inverter, runs on diesel or runs on propane, Cabaret Tent Rentals carries a large assortment of generators for any situation.

PROPANE PATIO HEATERS

Another great solution available for heating outdoor spaces are our propane patio heaters. Using a liquid propane tank as their fuel source, the heaters are lightweight and durable and do not require an electrical connection.

Each propane patio heater covers approximately a 100 square foot area, running at a maximum of 40,000 BTU per hour and features adjustable heat control to suit your specific needs. The propane tank is conveniently housed inside the base of each heater, hiding it from view, and giving you the freedom to move the heaters wherever you need them most.
